

Conservation

Conservation is at the heart of all we do here at Northumberland College Zoo

We focus on two main types of conservation:

In-situ conservation – supporting species in their actual wild habitats.

Ex-situ conservation – supporting species away from their wild habitats.

Bush dogs

Fijian Iguana

Black and White Ruffed Lemurs

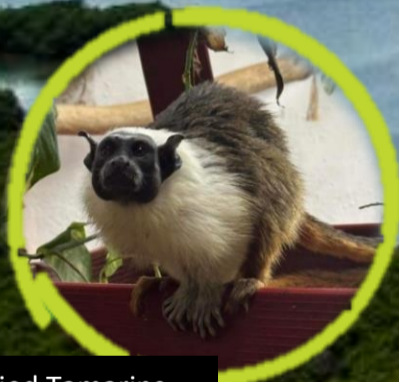

Crowned Lemur

Utila Iguana

Kirk's Dik-dik

Pied Tamarins

Von Der Decken's Hornbill

Ex - situ Conservation Breeding Programmes

We are Part of the **British and Irish Association of Zoos and Aquariums (BIAZA)**. Being part of the association allows us to join breeding programmes to support endangered species around the world.

Each year we support these species by sharing information about their care and husbandry whilst working with other zoos to share surplus animals.

We use these ambassadors for their species to educate and highlight their threats in the wild and showing people how they can help.

To find out more about the conservation we carry out here please head to the website or ask one of our amazing team!
